FIG. 3

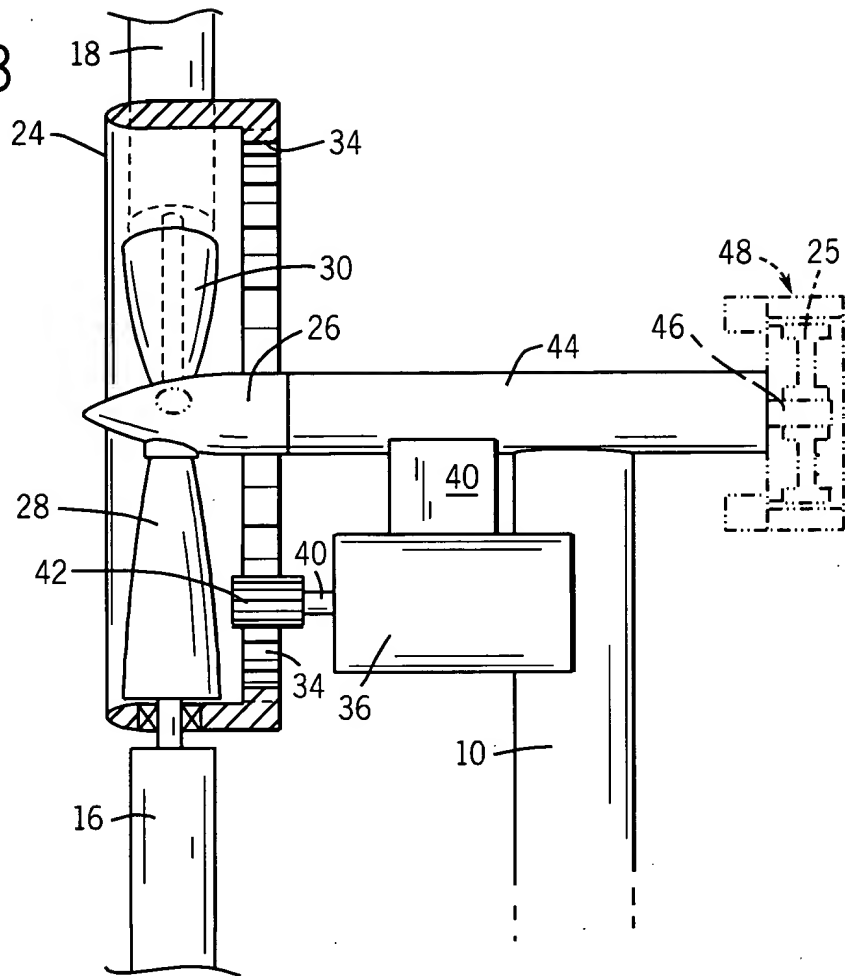

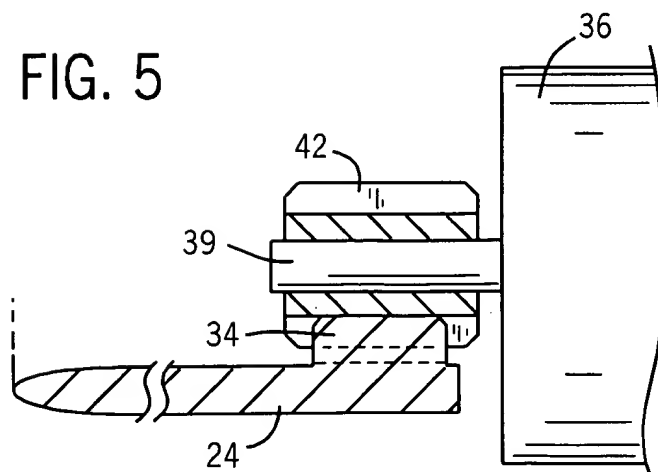

FIG. 5

A cross-sectional diagram of a medical device, likely a catheter or probe, with various components labeled with numbers. The device has a central shaft (52) passing through a series of components. At the top, there is a cap or seal (18) with a central opening (54). Below this is a flange (24) with a central opening (64). The main body of the device is shown in cross-section with diagonal hatching. A central shaft (52) runs through the center. A coiled spring or wire (56) is located within the shaft. At the bottom, there is a base (60) with a central opening (58). A dashed line (26) indicates a curved path or movement of the device. Other labels include 30, 62, and 66.
